Dear Mr. Nugent:

Re: Plans and Specifications for
Sludge Dewatering Facilities
Container Corporation of America
Wabash

You are hereby notified that the above project has been reviewed in accordance with established guidelines; and the Technical Secretary has on this date caused to be issued a Construction Permit, pursuant to 330 IAC 3-2-1 (formerly Indiana Stream Pollution Control Board Regulation SPC 15). Nothing herein shall be construed as guaranteeing that the above project shall meet standards, limitations or requirements of this or any other agency of State or Federal government, as this agency has no control over the actual construction and/or operation of the above-referenced project. This letter shall act as your Construction Permit only.

The Container Corporation of America (CCA) owns a 2 mgd activated sludge treatment plant which is operated by the City of Wabash. The plant currently treats 1 mgd of process waste from CCA and 1 mgd from the adjacent City of Wabash Wastewater Treatment Plant.

It is proposed to install a belt filter press to dewater digested sludge from the CCA and Wabash Wastewater Treatment Plants. Facilities will include a new sludge mixing basin and new sludge building housing sludge pumps, belt filter press, and dewatered sludge handling facilities.

The liquid sludge loading facility will remain in operation as a back-up to the new sludge system.

This permit is conditioned upon the following:

1. That additional treatment facilities will be installed if the proposed facilities fail to provide adequate control.
2. That the Company notify the Indiana Stream Pollution Control Board of the date of start-up and completion of the proposed project.

Janu , 24, 1980

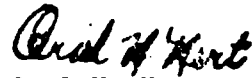

3. That the method and system of sludge disposal be approved by the Solid Waste Management Section of the Indiana State Board of Health.

No material changes in the plans, construction or operation of this project shall be made without first submitting to this office a detailed statement of such proposed changes or additions and obtaining concurrence from this office.

Plans and specifications were prepared by HNTB--Henry B. Steeg and Associates Division, certified by George K. Erganian, P.E., and submitted for review on November 28, 1979.

You are further notified that this Construction Permit will expire, without notice, if construction is not begun before February 1, 1981.

Very truly yours,

Oral H. Hert
Technical Secretary
and
Director
Bureau of Engineering
Indiana State Board of Health
